

# **PRO | SERVICES<sup>TM</sup>**

**PROGRAM • RELIABILITY • OPTIMIZATION SERVICES**

**Brand Energy & Infrastructure Services'** unmatched experience, expertise and extensive portfolio of service offerings make it the leading provider of specialty services to North America's energy markets. As a natural extension to our diverse service capabilities, Brand **PRO**Services offers **Programs, Reliability and Optimization Services** related to thermal insulation and atmospheric coatings. We proactively support, manage and maintain the well-being of our clients' assets.

**PRO|Therm Services** utilizes Brand's 50 years of experience in insulation services, plus our expertise in industry best practices, including winterization programs; noise minimization; personnel protection; insulating coatings; and energy conservation studies, to update and optimize any insulation program. PRO|Therm Services also employs the latest cutting-edge insulation materials technology, ensuring our clients receive the most innovative solutions. PRO|Therm's core service offerings include:

- Heat loss / energy conservation
- Insulation optimization & maintenance programs (IOMS)
- Thermography services
- CUI (corrosion under insulation) program support

**PRO|Coat Services** leverages Brand's decades of industrial coating and painting expertise to offer our clients facility assessments; surveys; atmospheric coatings and corrosion management programs to help identify and manage corrosion-based risks, developing an optimized coatings lifecycle for their facility and its assets. PRO|Coat's core service offerings include:

- Surveys, assessments and programmed maintenance
- Optimized coatings life cycle approach
- Corrosion management programs

Using **PRO|Therm Services** to develop an optimized insulation system, clients will see a return on their investment through multiple opportunities, including:

- Decrease in energy consumption
- Smaller environmental footprint through lowering emissions
- Reduction in safety hazards for employees
- Process design integrity

**INSULATION SERVICES INCLUDE:**

Energy Conservation/Heat Loss Studies

- Utilization of the National Insulation Associations' 3E Plus Insulation Energy Appraisal Program along with certified appraisers with 15-plus years' experience
- Trained thermography technicians and leading edge thermography equipment and software
- Excellent program management capabilities
- Experienced program execution resources

**CUI Services**

- 15-plus years in CUI mitigation and program execution experience
- Knowledge and support expertise for CUI program, including risk mitigation model; risk-based inspections; execution strategies; and technical, craft and equipment resources
- Innovative solutions through CUI specific technical and field capabilities; true multi-service capabilities for program optimization; and proficiency with leading methods for materials, coatings and execution
- Additional corrosion-related service offerings including Cathodic Protection surveys and systems; engineered composite systems for structural, piping and equipment needs; and shop services in select regions of North America, by leveraging the larger Brand organization.

**Insulation Optimization & Maintenance Services (IOMS)**

- Audits of insulation systems for maximum efficiency and alignment with client's standards and specifications
- Surveys and reviews using standard approach
- Validation of systems and specifications for intended service, including economic thickness and industry best practices
- Insured annuity of Heat Loss Mitigation Projects

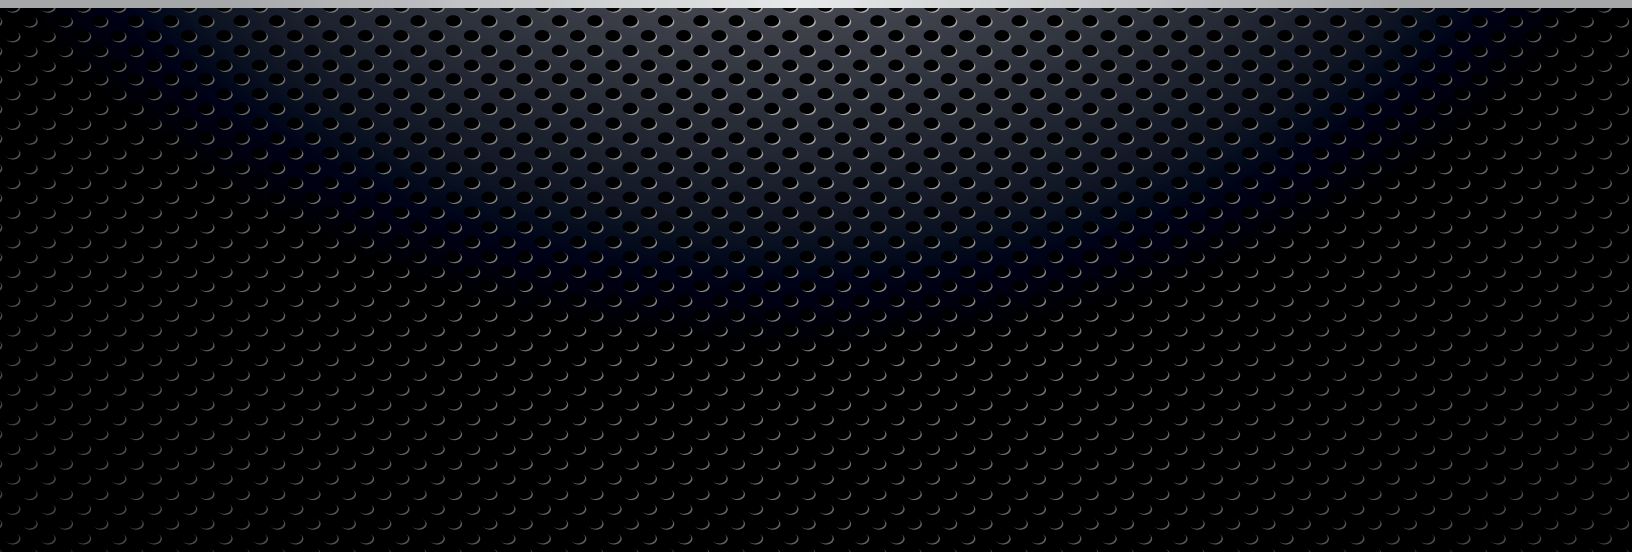

**PRO|Coat Services** helps clients take a proactive and planned approach to corrosion management and atmospheric coatings programs to reduce their cost per unit and optimize the lifecycle of their coatings.

Brand's PRO|Coat corrosion management experience and expertise includes:

- Atmospheric coatings surveys, assessments, programs
- CUI/CUF (Corrosion Under Fireproofing) program support
- Soil to air program support
- Special emphasis programs, such as composite repairs for structural and piping systems; engineering and design related issues; process specific corrosion, cooling tower or other fuming/misting areas and numerous others
- Cathodic protection services and Surveys; composite repair technology; and more, leveraging the larger Brand organization
